

Everyone has a part to play in fire safety

Combustible cladding detected on the exterior of your building doesn't necessarily mean that your building is unsafe. However, once a fire starts combustible cladding may contribute to the spread of fire.

There are a few simple steps that you should follow to minimise the risk of fire and keep you, your neighbours and your family safe. **In case of an emergency, call 000 (triple zero).**

Do not smoke on balconies

Do not use barbecues on balconies

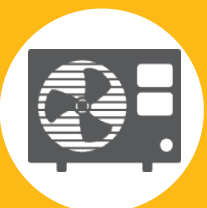

Do not store gas bottles on balconies

Ensure smoke alarms are not covered or disconnected and are tested monthly. Replace nine-volt batteries every year. Consider changing to smoke alarms with a 10-year lithium battery.

Keep balconies, hallways and evacuation routes clear of clutter and rubbish. Ensure you have an evacuation plan.

Keep clothing and other materials at least one metre away from air conditioning units
